| 70141605-ITQ-233 Integrated Pest Management | Integrated Pest Management (IPM) methods should be used to the extent possible to remove and exterminate rodents, insects, and other pests. IPM is an effective and environmentally sensitive approach to pest management that relies on a combination of common-sense practices. IPM programs use current, comprehensive information on the life cycles of pests and their interaction with the environment. This information, in combination with available pest control methods, is used to manage pest damage by the most economical means, and with the least hazard to people, property, and the environment.

IPM is the selection, integration, and implementation of multiple pest control techniques based on predictable economic, ecological, and sociological consequences, making maximum use of naturally occurring pest controls, such as weather, disease agents, and parasitoids, using various biological, physical, chemical, and habitat modification methods of control, and using artificial controls only as required to keep particular pests from surpassing intolerable population levels predetermined from an accurate assessment of the pest damage potential and the ecological, sociological, and economic cost of other control measures. Once monitoring, identification, and action thresholds indicate that pest control is required, and preventive methods are no longer effective or available, IPM programs then evaluate the proper control method, both for effectiveness and risk.

Effective, less risky pest controls are chosen first, including highly targeted chemicals, such as pheromones to disrupt pest mating, or mechanical control, such as trapping or weeding. If further monitoring, identifications, and action thresholds indicate that less risky controls are not working, then additional pest control methods would be employed, such as targeted spraying of pesticides. Application(s) of non-specific pesticides is a last resort. All label directions shall be followed.

**Initial Inspection:** Contractor shall, at no charge, provide a complete, initial inspection of the facility requesting services. Results of the inspection shall be reported as part of the price quote requested by an agency.

   COSTARS sales for the ITQ contract can now be reported through the automated COSTARS sales reporting system located on the COSTARS website. Information required will be your vendor number, contract number, date of sale, customer name and the amount of the sale. It is also recommended that you record the COSTARS Member ID number. Detailed instructions appear below.
The deadline for submitting sales information is the 15th day of the month following the end of the quarter. Failure to report COSTARS sales is in breach of contract, and may result in DGS suspending your participation in the COSTARS program.

Agencies will exercise a scoring method based upon the criteria set forth in the RFQ. The Scoring Methods are defined as follows:

- **Best Value**
  - Refers to the process of selecting the quote which provides the greatest value to the agency based on evaluating and comparing all pertinent criteria, including cost, so that the Contractor whose overall proposal best suits the agency’s needs is selected for each individual project; and

- **Low Cost**
  - Refers to the lowest cost quoted from all proposals received that are deemed both responsive and responsible for the project.
